What exactly is Laravel?

Expressive, beautiful syntax.

Value elegance, simplicity, and readability? You'll fit right in. Laravel is designed for people just like you. If you need help getting started, check out Laracasts and our great documentation.

```
class Purchase implements ShouldQueue
{

    /**
     * Purchase a new podcast.
     */
     public function handle(Repository $rep
     {
```

```
~/Apps $ php artisan make:migration create_users_t
Migration created successfully!

~/Apps $ php artisan migrate --seed
Migrated: 2015_01_12_000000_create_users_table
Migrated: 2015_01_12_100000_create_password_resets_
Migrated: 2015_01_13_162500_create_projects_table
Migrated: 2015_01_13_162508_create_servers_table
```

Tailored for your team.

Whether you're a solo developer or a 20 person team, Laravel is a breath of fresh air. Keep everyone in sync using Laravel's database agnostic migrations and schema builder.

Modern toolkit. Pinch of magic.

An amazing ORM, painless routing, powerful queue library, and simple authentication give you the tools you need for modern, maintainable PHP. We sweat the small stuff to help you deliver amazing applications.

```
Route::resource('photos', 'PhotoController'

/**
 * Retrieve A User...
 */
Route::get('/user/{user}', function(App\Use
{
    return $user;
```

Quick note on versions

- **5.5 LTS** bug fixes for 2 years, security fixes for 3 years
- **Non LTS**: bug fixes for 6 months, security fixes for 1 year

5.5 is the current LTS

Which version should you use?

59

Laravel 5.5 Will Be The Next LTS Release (laravel-news.com)

[–] utotwel [+1] Created Laravel 29 points 1 month ago

I do think LTS is generally a bad idea for the vast majority of products. However, some people can't do a project on Laravel at all for some clients unless Laravel has an LTS. I think that's stupid, but it's just the reality of things right now. Some companies have some kind of formal process where any adopted framework must have an LTS. If this helps those people use Laravel for those projects then so be it I guess.

I would still recommend they try their hardest to educate the client on always just using the latest version.

Database Seeders

```php
<?php

use Illuminate\Database\Seeder;

class DatabaseSeeder extends Seeder
{
    /**
     * Run the database seeds.
     *
     * @return void
     */
    public function run()
    {
        factory(App\User::class, 5)->create();
    }
}
```

Artisan Commands

```
vagrant@qs:~/qs$ artisan
Laravel Framework 5.6.28

Usage:
  command [options] [arguments]

Options:
  -h, --help            Display this help message
  -q, --quiet           Do not output any message
  -V, --version         Display this application version
      --ansi            Force ANSI output
      --no-ansi         Disable ANSI output
  -n, --no-interaction  Do not ask any interactive question
      --env[=ENV]       The environment the command should run under
  -v|vv|vvv, --verbose  Increase the verbosity of messages: 1 for normal outpu
or debug

Available commands:
  clear-compiled       Remove the compiled class file
  down                 Put the application into maintenance mode
  env                  Display the current framework environment
  help                 Displays help for a command
  inspire              Display an inspiring quote
  list                 Lists commands
  migrate              Run the database migrations
```

Artisan Commands

```
vagrant@qs:~/qs$ artisan | grep make
 make
  make:auth            Scaffold basic login and registration views and routes
  make:channel         Create a new channel class
  make:command         Create a new Artisan command
  make:controller      Create a new controller class
  make:event           Create a new event class
  make:exception       Create a new custom exception class
  make:factory         Create a new model factory
  make:job             Create a new job class
  make:listener        Create a new event listener class
  make:mail            Create a new email class
  make:middleware      Create a new middleware class
  make:migration       Create a new migration file
  make:model           Create a new Eloquent model class
  make:notification    Create a new notification class
  make:observer        Create a new observer class
  make:policy          Create a new policy class
  make:provider        Create a new service provider class
  make:request         Create a new form request class
  make:resource        Create a new resource
  make:rule            Create a new validation rule
  make:seeder          Create a new seeder class
  make:test            Create a new test class
```

Create Migration

```

Questions?

Time to do stuff

- Open quickstart-5.6
- Run: composer install
- cp .env.example .env
- php artisan key:generate
- Run: ./vendor/bin/homestead make
- Run: vagrant up
- Run: vagrant ssh

- Run: cd quickstart-5.6
- Run: artisan migrate
- Run: artisan db:seed
- Run: npm install
- Run: npm run dev

https://github.com/svpernova09/quickstart-5.6

Exercise 1 - 30 Minutes

- Create Migration to create Tasks table
  - Tasks should have name and user_id fields (and timestamps())
- Create Model for Task
- Create Model Factory and Database Seeder for Tasks
- Create tasks view that displays all tasks

Exercise 1 Solution

To see a possible solution
checkout the branch “exercise-1”

```
git checkout exercise-1
composer install
```

Testing our Application

Testing our Widgets

Testing our Widgets

```
19
20      public function testWidgetsViewHasData()
21      {
22          $this->visit( uri: '/widgets')
23              ->seePageIs( uri: '/widgets');
24
25          $this->assertViewHas('widgets');
26      }
27
28      public function testDataExists()
29      {
30          $widget = factory(App\Widget::class, 1)->create();
31
32          $this->visit( uri: '/widgets')
33              ->see($widget[0]->name);
34      }
```

Testing our Widgets

```
34      public function testDataExists()
35      {
36          $widget = factory(App\Widget::class, 1)->create();
37
38          $this->visit( uri: '/widgets')
39              ->see($widget[0]->name);
40      }
41  }
```

Running phpunit

```
vagrant@qs:~/qs$ phpunit
PHPUnit 7.2.7 by Sebastian Bergmann and contributors.

.......                                                           7 / 7 (100%)

Time: 1.64 seconds, Memory: 16.00MB

OK (7 tests, 24 assertions)
vagrant@qs:~/qs$
```

Route Groups

Form Requests

```
vagrant@qs:~/qs$ artisan make:request WidgetCreateRequest
Request created successfully.
vagrant@qs:~/qs$
```

WidgetCreateRequest

HTML Forms

Add Widget

Test Add Widget Form

Exercise 2 - 30 Minutes

- Create view containing a form to add Tasks
  - Form will have a drop down of users to select from to assign user's id to the Task user_id field
- Create tests for all new functionality

Exercise 2 Solution

To see a possible solution
checkout the branch “exercise-2”

```
git checkout exercise-2
composer dump-auto
```

Questions?

Controllers

```
vagrant@qs:~/qs$ artisan make:controller WidgetController
Controller created successfully.
vagrant@qs:~/qs$
```

Routing to Controllers

```php
Route::get('/widgets', function () {
    $widgets = Widget::all();

    return view('widgets.index')
        ->with('widgets', $widgets);
});

Route::get('/widgets/add', function () {

    return view('widgets.add');
});

Route::post('/widgets', function (WidgetCreateRequest $request) {
    $widget = new Widget();
    $widget->name = $request->name;
    $widget->description = $request->description;
    $widget->price = $request->price;
    $widget->save();

    return redirect()->to('/widgets');
});
```

```php
<?php

namespace App\Http\Controllers;

use App\Http\Requests\WidgetCreateRequest;
use App\Widget;

class WidgetController extends Controller
{
    public function index()
    {
        $widgets = Widget::all();

        return view('widgets.index')
            ->with('widgets', $widgets);
    }

    public function add()
    {
        return view('widgets.add');
    }

    public function create(WidgetCreateRequest $request)
    {
        $widget = new Widget();
        $widget->name = $request->name;
        $widget->description = $request->description;
        $widget->price = $request->price;
        $widget->save();

        return redirect()->route('widgets.index');
    }
}
```

Routing to Controllers

```
19  Route::group(['middleware' => 'web'], function () {
20      Route::get('/', function () {
21          return view('welcome');
22      });
23
24      Route::get('widgets', 'WidgetController@index')->name('widgets.index');
25      Route::get('widgets/add', 'WidgetController@add')->name('widgets.add');
26      Route::post('widgets', 'WidgetController@create')->name('widgets.create');
```

Routing to Controllers

```
23      public function create(WidgetCreateRequest $request)
24      {
25          $widget = new Widget();
26          $widget->name = $request->name;
27          $widget->description = $request->description;
28          $widget->price = $request->price;
29          $widget->save();
30
31          return redirect()->route('widgets.index');
32      }
```

Widget Tests Still Pass

```
vagrant@qs:~/qs$ phpunit tests/Feature/widgets/
PHPUnit 7.2.7 by Sebastian Bergmann and contributors.

.....                                                   6 / 6 (100%)

Time: 1.36 seconds, Memory: 16.00MB

OK (6 tests, 23 assertions)
vagrant@qs:~/qs$
```

Exercise 3 - 20 Minutes

- Create TaskController
- Move Task logic from web.php to TaskController
- Run tests to ensure everything still works

Exercise 3 Solution

To see a possible solution
checkout the branch “exercise-3”

```
git checkout exercise-3
composer dump-auto
```

Questions?

Model Relationships

- One to One
  - A User has a Phone Number
- One to Many
  - A Post has many Comments
- Many to Many
  - Users have may Roles

Task belongs to User

User has many Tasks

Query Model Relationships

The N+1 Problem

Eager Loading

```
10  class TaskController extends Controller
11  {
12      public function index()
13      {
14          $tasks = Task::with('user')->get();
15
16          return view('tasks.index')
17              ->with('tasks', $tasks);
18      }
19
```

Exercise 4 - 30 Minutes

- Implement Eager Loading for Tasks
- On the Tasks index view, show the user assigned
- Create Users index view, show number of Tasks each has assigned

Exercise 4 Solution

To see a possible solution
checkout the branch “exercise-4”

```
git checkout exercise-4
composer dump-auto
```

Questions?

How do we get it to the server?

Envoy

Envoy provides easy ways to run command commands on remote servers such as pulling code from git, running artisan commands, etc.

Envoy uses blade template syntax

Envoy only supports Mac & Linux

Sample Envoy Config

```
1  @servers(['prod' => 'forge@hackmemphis.com'])
2
3  @task('deploy:prod', ['on' => 'prod'])
4  cd /home/forge/hackmemphis.com
5  ./deploy.sh
6  @endtask
```

Sample Envoy Config

```
@servers([
        'prod' => 'forge@hackmemphis.com',
        'dev' => 'forge@dev.hackmemphis.com',
    ])

@task('deploy:prod', ['on' => 'prod'])
cd /home/forge/hackmemphis.com
./deploy.sh
@endtask

@task('deploy:dev', ['on' => 'dev'])
cd /home/forge/dev.hackmemphis.com
./deploy.sh
@endtask
```

Envoy Configuration

Easy OAuth Login

Laravel Socialite

- Easily allow users to authenticate via Github, Google, Twitter, Facebook, Bitbucket, or Linkedin
- Handles almost all the boilerplate for you

https://github.com/laravel/socialite

composer require laravel/socialite

```
vagrant@qs:~/qs$ composer require laravel/socialite
Using version ^3.0 for laravel/socialite
./composer.json has been updated
Loading composer repositories with package information
Updating dependencies (including require-dev)
Package operations: 6 installs, 0 updates, 0 removals
  - Installing guzzlehttp/promises (v1.3.1): Loading from cache
  - Installing psr/http-message (1.0.1): Loading from cache
  - Installing guzzlehttp/psr7 (1.4.2): Loading from cache
  - Installing guzzlehttp/guzzle (6.3.0): Loading from cache
  - Installing league/oauth1-client (1.7.0): Downloading (100%)
  - Installing laravel/socialite (v3.0.9): Downloading (100%)
Writing lock file
Generating optimized autoload files
> Illuminate\Foundation\ComposerScripts::postAutoloadDump
> @php artisan package:discover
Discovered Package: fideloper/proxy
Discovered Package: laravel/tinker
Discovered Package: laravel/socialite
Package manifest generated successfully.
vagrant@qs:~/qs$
```

Configure Socialite

AuthController

```php
<?php

namespace App\Http\Controllers\Auth;

use Socialite;

class AuthController extends Controller
{
    /**
     * Redirect the user to the GitHub authentication page.
     *
     * @return Response
     */
    public function redirectToProvider()
    {
        return Socialite::driver('github')->redirect();
    }

    /**
     * Obtain the user information from GitHub.
     *
     * @return Response
     */
    public function handleProviderCallback()
    {
        $user = Socialite::driver('github')->user();

        // $user->token;
    }
}
```

Add Socialite Routes

Making $$$

Laravel Cashier

- Expressive interface to Stripe and Braintree subscription billing services
- Free, open source package easily added to Laravel
- Designed for subscription, not one off charges

https://laravel.com/docs/5.5/billing

Installing Cashier

```
vagrant@qs:~/qs$ composer require "laravel/cashier":"~7.0"
./composer.json has been updated
Loading composer repositories with package information

Updating dependencies (including require-dev)
Package operations: 6 installs, 0 updates, 0 removals
  - Installing stripe/stripe-php (v5.6.0): Downloading (100%)
  - Installing sabberworm/php-css-parser (8.1.0): Downloading (100%)
  - Installing phenx/php-svg-lib (v0.3): Downloading (100%)
  - Installing phenx/php-font-lib (0.5.1): Downloading (100%)
  - Installing dompdf/dompdf (v0.8.1): Downloading (100%)
  - Installing laravel/cashier (v7.0.12): Downloading (100%)
Writing lock file
Generating optimized autoload files
```

Cashier Migration

Billable Trait

Stripe API Keys

Subscribing a User

```
35  Route::get('/subscribe', function(Request $request) {
36      $creditCardToken = $request->creditCardToken;
37
38      $user = \App\User::find(1);
39
40      $user->newSubscription('main', 'monthly')
41          ->create($creditCardToken);
42  });
```

https://laravel.com/docs/5.3/billing

Laravel Spark

- SASS in a box
- You bring the Service
- Spark brings the boilerplate of billing, authentication, and more
- $99 For a single site
- $299 For unlimited sites

Laravel Spark

Spark Releases Licenses Documentation

Getting Started

- Installation
- Upgrade Guide
- Quickstart
- FAQ
- Release Notes

Server

- Announcements
- API
- Billing
- Customization Primer
- European VAT

Installation

- Requirements
- Installation
  - Spark Installer
  - Installation Via Composer
  - Linking The Storage Directory
- Installation Types

Requirements

Laravel Spark has a few requirements you should be aware of before installing:

- Composer
- Laravel Framework 5.5+
- Laravel Mix
- Bootstrap 3 (LESS)
- Node.js & NPM

Before installing Spark, make sure you have the latest version of Node and NPM. You can download a graphical installer for Node on the Node website.

The Vue.js JavaScript framework is utilized on the registration and settings pages; however, you are free to build

Questions?

Authentication

artisan make:auth

```
vagrant@qs:~/qs$ artisan make:auth

Multiple Middleware

Not Logged In?

Exercise 5 - 40 Minutes

- Add Auth to the application
- Add navigation to Users, Widgets, and Tasks to the layout
  - Make sure to fix the <title> tag in the layout
- Run tests to see what is broken

Test Errors and Failure

```
vagrant@qs:~/qs$ phpunit
PHPUnit 5.6.1 by Sebastian Bergmann and contributors.

F....E...E......E..                                                19 / 19 (100%)

Time: 1.78 seconds, Memory: 18.00MB

There were 3 errors:

1) TasksTest::testTasksNavigation
InvalidArgumentException: Could not find a link with a body, name, or ID attribute of [Tasks].

/home/vagrant/qs/vendor/laravel/framework/src/Illuminate/Foundation/Testing/Concerns/InteractsWithPages.php:488
/home/vagrant/qs/tests/tasks/TasksTest.php:22

2) UsersTest::testUsersNavigation
InvalidArgumentException: Could not find a link with a body, name, or ID attribute of [Users].

/home/vagrant/qs/vendor/laravel/framework/src/Illuminate/Foundation/Testing/Concerns/InteractsWithPages.php:488
/home/vagrant/qs/tests/users/UsersTest.php:22

3) WidgetsTest::testWidgetsNavigation
InvalidArgumentException: Could not find a link with a body, name, or ID attribute of [Widgets].

/home/vagrant/qs/vendor/laravel/framework/src/Illuminate/Foundation/Testing/Concerns/InteractsWithPages.php:488
/home/vagrant/qs/tests/widgets/WidgetsTest.php:22
```

Run test as a user

Test now passes

```
vagrant@qs:~/qs$ phpunit tests/HomePageTest.php
PHPUnit 5.6.1 by Sebastian Bergmann and contributors.

.                                                                   1 / 1 (100%)

Time: 868 ms, Memory: 12.00MB

OK (1 test, 4 assertions)
vagrant@qs:~/qs$
```

Exercise 5 Solution

To see a possible solution
checkout the branch “exercise-5”

```
git checkout exercise-5
composer dump-auto
```

Questions?

Artisan Commands

```
Laravel Framework 5.4.19

Usage:
  command [options] [arguments]

Options:
  -h, --help            Display this help message
  -q, --quiet           Do not output any message
  -V, --version         Display this application version
      --ansi            Force ANSI output
      --no-ansi         Disable ANSI output
  -n, --no-interaction  Do not ask any interactive question
      --env[=ENV]       The environment the command should run unde
  -v|vv|vvv, --verbose  Increase the verbosity of messages: 1 for n

Available commands:
  clear-compiled       Remove the compiled class file
  down                 Put the application into maintenance mode
```

Create a new Command

```
vagrant@quick:~/qs$
vagrant@quick:~/qs$ artisan make:command BasicCommand
Console command created successfully.
vagrant@quick:~/qs$
```

Create a new Command

app/Console/Kernel.php

```php
<?php

namespace App\Console;

use ...

class Kernel extends ConsoleKernel
{
    /**
     * The Artisan commands provided by your application.
     *
     * @var array
     */
    protected $commands = [
        BasicCommand::class,
    ];
```

BasicCommand.php

```php
<?php

namespace App\Console\Commands;

use Illuminate\Console\Command;

class BasicCommand extends Command
{
    /**
     * The name and signature of the console command.
     *
     * @var string
     */
    protected $signature = 'basic:cmd';

    /**
     * The console command description.
     *
     * @var string
     */
    protected $description = 'Basic Command';

    /**
     * BasicCommand constructor.
     */
    public function __construct()
    {
        parent::__construct();
    }
```

Signature

```
9     /**
10     * The name and signature of the console command.
11     *
12     * @var string
13     */
14     protected $signature = 'basic:cmd';
15
```

Description

```
16      /**
17       * The console command description.
18       *
19       * @var string
20       */
21      protected $description = 'Basic Command';
```

Constructor

```
23      /**
24       * BasicCommand constructor.
25       */
26      public function __construct()
27      {
28          parent::__construct();
29      }
```

Handle The Command

```
31      /**
32       * Execute the console command.
33       *
34       * @return mixed
35       */
36      public function handle()
37      {
38
39      }
```

Running our Command

```
vagrant@quick:~/qs$ artisan basic:cmd
vagrant@quick:~/qs$
```

Output Some Text

```
31      /**
32       * Execute the console command.
33       *
34       * @return mixed
35       */
36      public function handle()
37      {
38          $this->info("Running the Basic Command");
39      }
```

Output Some Text

```
vagrant@quick:~/qs$ artisan basic:cmd
vagrant@quick:~/qs$ artisan basic:cmd
Running the Basic Command
vagrant@quick:~/qs$
```

Output Warning Text

```
31      /**
32       * Execute the console command.
33       *
34       * @return mixed
35       */
36      public function handle()
37      {
38          $this->info("Running the Basic Command");
39          $this->warn("This is a warning");
40      }
```

Output Warning Text

```
vagrant@quick:~/qs$ artisan basic:cmd
Running the Basic Command
This is a warning
vagrant@quick:~/qs$
```

Output Error Text

```
31      /**
32       * Execute the console command.
33       *
34       * @return mixed
35       */
36      public function handle()
37      {
38          $this->info("Running the Basic Command");
39          $this->warn("This is a warning");
40          $this->error("This is an error");
41      }
```

Output Error Text

```
vagrant@quick:~/qs$ artisan basic:cmd
Running the Basic Command
This is a warning
This is an error
vagrant@quick:~/qs$
```

Retrieving Input

Arguments

```
7   class InputExample extends Command
8   {
9       /**
10       * The name and signature of the console command.
11       *

40    {
41        $options = $this->options();
42
43        $this->info('Test Option: ' . $options['test']);
44    }
```

Options

```
vagrant@console:~/console$ artisan option:example --test=true
Test Option: true
vagrant@console:~/console$ artisan option:example
Test Option:
vagrant@console:~/console$
```

Options

```
39      public function handle()
40      {
41          $options = $this->options();
42
43          $this->info('Test Option: ' . $options['test']);
44
45          if(is_null($options['test'])) {
46              $this->info('Test Option is Null');
47          }
48      }
```

Options

```
vagrant@console:~/console$ artisan option:example
Test Option:
Test Option is Null
vagrant@console:~/console$
```

Prompt User For Input

```
38      public function handle()
39      {
40          $name = $this->ask('What is your name?');
41
42          $this->info('Name entered: ' . $name);
43      }
```

Prompt User For Input

```
vagrant@console:~/console$ artisan input:prompt

 What is your name?:
 > Joe

Name entered: Joe
vagrant@console:~/console$
```

Prompt User For Input

```
38      public function handle()
39      {
40          $name = $this->ask('What is your name?');
41
42          $this->info('Name entered: ' . $name);
43
44          $password = $this->secret('Enter your password');
45
46          $this->info('Password entered: ' . $password);
47      }
```

Ask for Confirmation

```
38      public function handle()
39      {
40          if ($this->confirm('Do you wish to continue? [y|N]')) {
41              $name = $this->ask('What is your name?');
42
43              $this->info('Name entered: ' . $name);
44
45              $password = $this->secret('Enter your password');
46
47              $this->info('Password entered: ' . $password);
48
49          }
```

Ask for Confirmation

```
vagrant@console:~/console$ artisan input:prompt

 Do you wish to continue? [y|N] (yes/no) [no]:
 > y

 What is your name?:
 > Joe

Name entered: Joe

 Enter your password:
 >

Password entered: hunter2
vagrant@console:~/console$ artisan input:prompt

 Do you wish to continue? [y|N] (yes/no) [no]:
 > no

vagrant@console:~/console$
```

Prompt User For Input

```
vagrant@console:~/console$ artisan input:prompt

 What is your name?:
 > Joe

Name entered: Joe

 Enter your password:
 >

Password entered: hunter2
vagrant@console:~/console$
```

Exercise 6 - 40 Minutes

- Create a command “auth:register” that allows a user to register a new account
  - Should ask the user for name, email, and password
- Create a command “auth:login” that allows a user to authenticate.
  - Successful authentication should greet the user by name

Exercise 6 Solution

To see a possible solution
checkout the branch “exercise-6”

```
git checkout exercise-6
composer dump-auto
```

Mailables

```
vagrant@quick:~/qs$ artisan make:mail VerifyJoinEmail
Mail created successfully.

31 return $this->view(view: 'view.name');
32 }

Mailables build()

```
29      public function build()
30      {
31          return $this->from('example@example.com')
32              ->view('emails.verify-email')
33              ->with([
34                  'email' => $this->marketing_email->email,
35                  'hash' => urlencode($this->marketing_email->hash),
36              ]);
37      }
38  }
```

Sending Mail

```
Mail::to('email@host.com')
    ->send(new VerifyJoinEmail($data));
```

The Mail View

```
<div>
    <p>
        Hello,
    </p>
    <p>
        Please verify your email: {{ $email }} by
        <a href="http://localhost:8000/marketing/verify-email/{{ $hash }}">
            clicking here
        </a>
    </p>
</div>
```

The “log” Mail Driver

```

tail -f storage/logs/laravel.log

Exercise 7 - 40 Minutes

- Update .env to use localhost on Port 1025 for mail
- Create an email collection form that validates and stores emails
  - POST & GET Join Form Routes
  - Process Join Form Request
  - MarketingEmail Model
  - MarketingEmail Controller
  - Validate email signups by email

Exercise 7 Solution

To see a possible solution
checkout the branch “exercise-7”

```
git checkout exercise-7
composer dump-auto
```

Questions?

When things go wrong

Add a partial view

```
1  @if (count($errors) > 0)
2      <div class="alert alert-danger">
3          <ul>
4              @foreach ($errors->all() as $error)
5                  <li>{{ $error }}</li>
6              @endforeach
7          </ul>
8      </div>
9  @endif
```

Add partial to layout

Display error to the user

Test Our Error Messages

```
54
55      public function testErrorMessages()
56      {
57          $user = factory(App\User::class)->create();
58
59          $this->actingAs($user)
60              ->visit('/widgets/add')
61              ->press('Add Widget')
62              ->see('You must enter a Widget Name')
63              ->see('You must enter a Widget Description')
64              ->see('You must enter a Widget Price')
65              ->seePageIs('/widgets/add');
66      }
67
```

Test Our Error Messages

Exercise 8 - 30 Minutes

- Add messages() method on Task Form Requests
- Add {{ old('input') }} To form values for Tasks
- Add tests to ensure old input works and your error messages are showing up as expected

Exercise 8 Solution

To see a possible solution
checkout the branch “exercise-8”

```
git checkout exercise-8
composer dump-auto
```

What if users wanted an API to get Widget info?

Add API Route

```
16
17  Route::get('/user', function (Request $request) {
18      return $request->user();
19  })->middleware('auth:api');
20
21
22  Route::get('/widgets', function (Request $request) {
23      return Widget::all();
24  });
25
26
27
```

Check API request:

localhost:8000/api/widgets

40
```

Throttle Your API Calls

Throttle Your API Calls

Exercise 9 - 30 Minutes

- Add API Routes to Query Tasks
- Write tests to ensure your api/tasks and api/tasks/{id} routes return the expected JSON format
  - Don’t forget about the N+1 Problem. Eager load users() with your Tasks

Exercise 9 Solution

To see a possible solution
checkout the branch “exercise-9”

```
git checkout exercise-9
composer dump-auto
```

Queueing with Laravel

- Queues
  - A line for processing jobs, each queue can have a high/low priority
- Connections
  - Connection to a job queue such as Redis
- Jobs
  - A task placed on a queue to be processed at a future time

Configure Queue Driver

```
19    QUEUE_DRIVER=redis
20
21    REDIS_HOST=127.0.0.1
22    REDIS_PASSWORD=null
23    REDIS_PORT=6379
24
25    MAIL_DRIVER=smtp
```

Create a Job

```
vagrant@qs:~/qs$ artisan make:job RunUsersActivityReport
Job created successfully.
vagrant@qs:~/qs$
```

RunUsersActivityReport Job

```
33      public function handle()
34      {
35          $users = User::all();
36          $users->sortBy( callback: 'name');
37
38          // cleanup old report
39          if (is_file( filename: storage_path() . '/users.csv')) {
40              unlink( filename: storage_path() . '/users.csv');
41          }
42
43          $csv = Writer::createFromPath(storage_path() . '/users.csv', 'w');
44          $csv->insertOne([
45              'name',
46              'email',
47              'created_at',
48          ]);
49
50          foreach ($users as $user) {
51              $csv->insertOne([
52                  $user->name,
53                  $user->email,
54                  $user->created_at,
55              ]);
56          }
57      }
```

Dispatch Our Job

```
25
26  Route::get('/run-user-report', function () {
27      RunUsersActivityReport::dispatch();
28      return redirect( to: '/');
29  });
30
```

Check on our Job

```
vagrant@qs:~/qs$ redis-cli
127.0.0.1:6379> KEYS *
1) "queues:default"
127.0.0.1:6379> DUMP queues:default

Supervising our Workers

```
[program:laravel-default-worker]
process_name=%(program_name)s_%(process_num)02d
command=php /home/vagrant/qs/artisan queue:work redis --sleep=3 --tries=3
autostart=true
autorestart=true
user=vagrant
numprocs=4
redirect_stderr=true
stdout_logfile=/home/vagrant/laravel-default-worker.log
~
```

sudo vi /etc/supervisor/conf.d/laravel-default-worker.conf

Updating Supervisor

```
vagrant@qs:~/qs$ sudo supervisorctl reread
laravel-default-worker: changed
vagrant@qs:~/qs$ sudo supervisorctl update
laravel-default-worker: stopped
laravel-default-worker: updated process group
vagrant@qs:~/qs$ sudo supervisorctl start laravel-default-worker:*
```

```
vagrant@qs:~/qs$ ps ax | grep artisan
 6704 ?        S      0:00 php /home/vagrant/qs/artisan queue:work redis --sleep=3 --tries=3
 6705 ?        S      0:00 php /home/vagrant/qs/artisan queue:work redis --sleep=3 --tries=3
 6706 ?        S      0:00 php /home/vagrant/qs/artisan queue:work redis --sleep=3 --tries=3
 6707 ?        S      0:00 php /home/vagrant/qs/artisan queue:work redis --sleep=3 --tries=3
 6740 pts/0    S+     0:00 grep --color=auto artisan
vagrant@qs:~/qs$
```
